

Professional Summary

Java Backend Developer with 4+ years of experience in backend engineering, microservices architecture, distributed systems, and cloud-native application development. Skilled in Java 8/17/21, Spring Boot, Spring Security, Kafka, AWS, Docker, PostgreSQL, MongoDB, and REST API development. Hands-on experience designing scalable systems, implementing event-driven solutions, optimizing database performance, and building highly available applications. Strong foundation in Data Structures, Algorithms, Object-Oriented Design, Design Patterns, and software engineering best practices.

Work Experience

NetConnect Global(Client - Airfi)

Senior Full Stack Engineer

Remote
Aug 2025 – Present

IFE & CC (In-Flight Entertainment & Cabin Crew Platform)

- Designed, developed, and maintained scalable backend services and REST APIs for aviation products supporting In-Flight Entertainment (IFE), Cabin Crew operations, onboard ordering, and passenger services using Java, Spring Boot, Microservices, MongoDB, CouchDB, and PostgreSQL.
- Migrated legacy applications from Java 8 to Java 11, improving application performance, maintainability, security compliance, and long-term platform support.
- Architected and implemented a serverless digital receipt processing solution using AWS API Gateway, EventBridge Scheduler, and AWS Lambda, enabling automated and asynchronous order processing workflows.
- Developed event-driven microservices using AWS SNS, SQS, and Lambda to deliver real-time order notifications and improve system scalability, reliability, and service decoupling.
- Led the migration of operational data from CouchDB to MongoDB, enhancing database performance, scalability, and data management capabilities.
- Implemented secure authentication and authorization using OAuth 2.0 and OpenID Connect (OIDC), ensuring secure access control across distributed services and APIs.
- Collaborated on system design, API design, database modelling, cloud integrations, and production support to build highly available, scalable, and cloud-native aviation solutions.

Tech Stack: Java 11, Spring Boot, Microservices, REST APIs, MongoDB, CouchDB, PostgreSQL, OAuth 2.0, OpenID Connect (OIDC), AWS Lambda, API Gateway, EventBridge, SNS, SQS, CloudWatch, S3, Docker, Git.

Masai

SDE-2

Remote
Aug 2024 – Aug 2025

Learning Management & Automation Platform

- Designed and developed scalable backend services and REST APIs using Java, Spring Boot, Microservices, MongoDB, and MySQL, supporting learning, assessment, certification, and administrative workflows.
- Built automation and reporting solutions that reduced manual reporting efforts by 40%, improving operational efficiency, data visibility, and business decision-making.
- Integrated AWS services including Lambda, EC2, API Gateway, SNS, and S3 to build scalable, event-driven, and cloud-native applications with asynchronous processing capabilities.
- Implemented secure authentication and authorization using AWS Cognito, enabling token-based access control, user management, and secure application access.

- Developed real-time student performance tracking, reporting, and automated assignment and contest grading systems, reducing manual effort and improving operational efficiency.
- Integrated payment gateway solutions to enable secure online transactions for students and distributors, ensuring reliable payment processing and enhanced user experience.

Tech Stack: Java, Spring Boot, Microservices, REST APIs, MongoDB, MySQL, AWS Lambda, EC2, API Gateway, Cognito, SNS, S3, Node.js, React, JavaScript, Git.

Ducat India

Backend Developer (Contract)

Remote

Jan 2024 – Aug 2024

- Designed and developed backend services and REST APIs for a Learning Management System (LMS) using Java, Spring Boot, Microservices, MySQL, and PostgreSQL, enhancing system functionality and performance.
- Implemented secure authentication and authorization using Spring Security and OAuth 2.0, enabling role-based access control (RBAC) for students, instructors, and administrators.
- Applied software design patterns, SOLID principles, and clean architecture practices to build scalable, maintainable, and extensible applications.
- Deployed and managed applications on AWS EC2 using Nginx, Linux, and Git-based CI/CD pipelines, ensuring reliable deployments and production stability.
- Collaborated on API design, database optimization, performance tuning, and production support to improve application reliability and user experience.

Tech Stack: Java, Spring Boot, Spring Security, OAuth 2.0, Microservices, REST APIs, MySQL, PostgreSQL, AWS EC2, Nginx, Linux, Git, CI/CD.

Masai

SDE-1

Bangalore

Jul 2022 – Jan 2024

Hukumu (Interview Management Platform)

- Designed and developed backend services and REST APIs using Java, Spring Boot, JPA/Hibernate, MySQL, and MongoDB to support candidate onboarding, interview scheduling, evaluation workflows, and recruitment operations.
- Implemented secure authentication and authorization using Spring Security and OAuth 2.0, enabling role-based access control (RBAC) for candidates, interviewers, mentors, and administrators.
- Built and optimized APIs for candidate management, interview scheduling, feedback collection, and evaluation tracking, improving system reliability and user experience.
- Integrated AWS services including EC2, S3, Lambda, SNS, and SQS to support document storage, asynchronous processing, email notifications, and interview reminder workflows.
- Developed scalable backend solutions following object-oriented design principles, RESTful architecture, and microservices best practices to improve maintainability and performance.

Tech Stack: Java, Spring Boot, Spring Security, OAuth 2.0, JPA/Hibernate, REST APIs, MySQL, MongoDB, AWS EC2, AWS S3, AWS Lambda, SNS, SQS, Git.

Trainee Projects

Digital Wallet Application

- Developed a full-stack digital wallet platform inspired by PhonePe and Paytm using Java, Spring Boot, ReactJS, and MySQL, enabling wallet management, peer-to-peer money transfers, and transaction tracking.
- Designed secure payment workflows with Spring Security and JWT-based authentication, ensuring secure access control and transaction processing.
- Implemented concurrency control using multithreading and locking mechanisms to maintain transaction consistency and prevent race conditions during wallet operations.

- Built RESTful APIs for wallet recharge, fund transfer, transaction history, and user management, following microservices and scalable application design principles.
- Tech Stack:** Java, Spring Boot, Spring Security, JWT, ReactJS, MySQL, REST APIs, Multithreading, Microservices.
- AI-Powered Log Analyzer**
- Designed and developed a distributed log processing platform using Java, Spring Boot, Kafka, and AWS (SQS, Lambda, CloudWatch) to process real-time application logs at scale.
 - Integrated AI-assisted log analysis for anomaly detection, error summarization, and intelligent debugging recommendations, improving issue resolution and system reliability.
 - Implemented event-driven processing and cloud-native architecture to support scalable and fault-tolerant log management.
- Tech Stack:** Java, Spring Boot, Kafka, AWS Lambda, SQS, CloudWatch, Microservices, AI/LLM Integration.

Technologies & Languages

- **Programming Languages:** Java (8, 11, 17), JavaScript, Node.js, Python
- **Frameworks & Backend:** Spring Boot, Spring MVC, Spring Security, Spring Batch, Microservices, REST APIs, JPA/Hibernate, OAuth 2.0, OpenID Connect (OIDC)
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Software Design, Design Patterns, SOLID Principles, Database Design, Distributed Systems
- **Databases & Caching:** MySQL, PostgreSQL, MongoDB, CouchDB, Redis, DynamoDB
- **Cloud & DevOps:** AWS (Lambda, EC2, ECS, S3, SQS, SNS, RDS, DynamoDB, EventBridge, CloudWatch), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Git
- **Messaging & Event Streaming:** Apache Kafka, AWS SNS, AWS SQS
- **Frontend Technologies:** React, HTML5, CSS3, JavaScript
- **AI & Emerging Technologies:** AI/LLM API Integration, Generative AI

Achievements and Responsibilities

- Project Level Recognition: Received project-level recognition twice for outstanding contributions and delivery excellence.
- Proof of Concepts (POCs): Implemented multiple POC projects, providing feasibility analysis and demonstrating adoption of new technologies.
- HackerRank Achievement: Earned 5-star rating on HackerRank, showcasing strong problem-solving skills in data structures and algorithms.

Education

- | | |
|---|-----------------------|
| • Indira Gandhi National Open University, Delhi
Master in Computer Application (Pursuing); | Jan 2026 – June 2028 |
| • Chaudhary Charan Singh University, Meerut
Bachelor in Computer Application ; | July 2017 – June 2020 |

Soft Skills

- Communication & Stakeholder Management: Effective communication and collaboration with cross-functional teams, stakeholders, and clients to deliver business-critical solutions.
- Problem-Solving & Analytical Thinking: Strong troubleshooting, root cause analysis, and decision-making skills for resolving complex technical challenges.
- Leadership & Agile Collaboration: Experience working in Agile/Scrum environments, mentoring team members, driving technical discussions, and delivering projects successfully.
